

## SIGNAL <> STATIC • CAL-001 • 1/2

[ Make notes • Make it yours >> ] 

Not every signal  
deserves the same setting.  
Some things need action.  
Some need monitoring.  
Some are mostly noise.

### Quick calibration check

What actually matters here?

What only feels loud?

Dial in the response.

Field notes ^^^

-----fold-----

## SIGNAL <> STATIC • CAL-001 • 2/2

[ Make notes • Make it yours >> ] 

### Watch for:

- overload distortion
- speed decisions
- emotional amplification
- stacked assumptions
- phantom urgency

Pause long enough

to separate:

signal | from static.

Over-rotated? Under-calibrated?

Adjust the setting.
